**I. Request for Continued Examination**

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/12/06 has been entered.

**II. Claim Objections**

1. Claim 32 is objected to because "housing" in line 10 should read - - base - -.

**III. Claim Rejections - 35 USC § 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claim(s) 31-35, 2-3, 6, 15, 18, 20-21, and 23 is/are rejected under 35 U.S.C. 103(a) as being unpatentable over UPDIKE (US 3,762,586 A) in view of SZINTE (US 5,833,428 A).

1.1. With respect to claim 31, and 33, UPDIKE discloses a vehicle (10) adapted to carry a collection container (42), and lifter assembly (54), having a lifter (74) for engaging and inverting refuse receptacles (146), transporter adapted to be mounted at the front of the vehicle (12), including a carrier (68) supporting the lifter (74) movable laterally between an extended position extending substantially beyond a side of the vehicle (10) and to a retracted dumping position in proximity to the collection container (42), the transporter comprising a lifter support (56) movably attached to the carrier (68)

for moving between a stored position generally adjacent to the front of the vehicle (12) and an operating position spaced forwardly of the vehicle (10) and laterally of the collection container (42), the lifter support (56) positioned generally adjacent to the carrier (68) in the stored position and generally forwardly from the carrier (68) in the operating position. UPDIKE employs an articulated boom to carry the lifter as opposed to the well-known rectilinearly translating carrier, shown, for example, in SZINTE. SZINTE teaches the transporter comprising a base (112) and elongated beam (114) moving linearly. It would have been obvious to one having ordinary skill in the art to modify UPDIKE with the transporter of SZINTE in order to collect and dump the refuse receptacles.

- 1.2. With respect to claim 32, and 34-35, UPDIKE discloses a refuse collection vehicle (10) having a front end (12) rear (16) sides, and cavity (14), lifter assembly carried at the front end (12), having a lifter (74) for engaging lifting and inverting a refuse receptacle (146) into (Col. 5 Li. 10) a collection container (42), and a transporter including a carrier supporting the lifter (74) movable laterally between a pickup position extending substantially beyond a side of the vehicle (10) and to a retracted position in proximity to the collection container (42), the carrier comprising a fixed member (62) mounted to the front of the vehicle (12), and a laterally movable member (60) to which the lifter (74) is secured, a hydraulic cylinder (64) associated with the fixed (62) and laterally movable member (60), a lifter support (56) pivotally attached to the carrier (at 60), for moving between a stored position adjacent to the front of the vehicle (12) and an operating position spaced forwardly of the vehicle and

laterally of the collection container (42), the lifter may be used to engage, lift and dump the contents of a curbside refuse receptacle (146) into (Col. 5 Li. 10) a collection container (42). UPDIKE employs an articulated boom to carry the lifter as opposed to the well-known rectilinearly translating carrier, shown, for example, in SZINTE. SZINTE teaches the transporter comprising a base (112) and elongated beam (114) moving linearly. It would have been obvious to one having ordinary skill in the art to modify UPDIKE with the transporter of SZINTE in order to collect and dump the refuse receptacles.

1.3. With respect to claim 2-3, 6, 15, 18, 20-21, and 23, UPDIKE additionally discloses an elongated tubular housing member (62) fixedly mounted to the vehicle (10), a sliding member (62) received therein, to which the lifter (74) is secured, a hydraulic cylinder (64) interposed therebetween, the lifter support (56) comprising a pair of spaced apart horizontally oriented beams (e.g., sidewalls) having an inboard (58) end pivotally secured to the carrier (60) and outboard (70) end secured to the lifter (74), a hydraulic cylinder (66) interposed between the lifter support (56) and the carrier (60) for moving between stored and operating positions.

#### **IV. Response to Applicant's Arguments**

Applicant's arguments entered 12/12/06 have been fully considered.

1. Applicant argues that claims 31-35, as amended, are not anticipated by UPDIKE because UPDIKE fails to teach a base member fixedly mounted to a vehicle and an elongated beam movably carried by the base that has a first portion to which the lifter support is mounted, as required by the present amendment. This argument is persuasive and the rejection under 35

Art Unit: 3652

USC 102(b) is therefore withdrawn. Upon further consideration however, a new grounds for rejection is presented above.
